

1. What resources are available for assessing the impacts of climate change in the state?
2. What entities do we need to engage in a Michigan climate coalition?
3. Would a "bottom-up" or "top-down" approach to impact assessment and adaptation planning be more likely to succeed in Michigan?
4. Is there a comparable issue in the state for which there is a model/template for structure, stakeholders, processes, and integration into management plans?
5. What incentives are available to encourage participation in a climate coalition?

- What are the next steps or the best processes to translate adaptation concerns into conservation actions?
